

## **ALPHABOT ADDS DATA AND ANALYSIS FOR MORE THAN 1,000 CRYPTO CURRENCIES, TOKENS**

### **Streamlines, Adds Transparency & Efficiency to Crypto Analysis and Investing**

CHICAGO, JULY 20, 2018 – [AlphaBot](#) – an efficient technology solution to the cumbersome process of sourcing, analyzing and allocating to alternative investments – today announced it has added data and analysis tools enabling investors for the first time to compare, portfolio build, and compile reports on more than 1,600 crypto currencies and tokens.

Launched in 2018, AlphaBot helps allocators -- including high net worth individuals, family offices and institutions -- find and connect with investment platforms, hedge funds, data sources and other providers. Using AlphaBot, allocators can obtain fund performance and benchmarking data, then model, build and execute portfolios all from a consistent, user-friendly interface.

“As the crypto currency markets grow and mature, Alphabot now is the only platform that allows for thorough research, analysis, and comparison of performance of crypto currencies along-side other investments including hedge funds, CTAs, and equities all in one place,” said Dmitri Alexeev, Ph.D., AlphaBot Chief Executive Officer.

There are now [more than 1,600 different cryptocurrencies with an aggregate market capitalization approaching \\$300 billion](#). Until today’s news from Alphabot, an investor looking to add crypto currencies to a portfolio faced a daunting task in gathering data and conducting research that was characterized by fragmented sources, multiple formats, and inefficient tools.

“Existing resources dedicated to crypto focus on streaming prices, and there is very little in terms of analytics,” said Mr. Alexeev. “Anyone seriously interested in the space needs much more than that. A potential investor wants to evaluate the impact of cryptos on an existing portfolio, build portfolios, analyze risks and drawdowns, and examine relationships between coins, hedge funds and CTAs, and equities. AlphaBot provides those capabilities and more.”

AlphaBot allows for analysis, comparison, building portfolios, and running reports on more than 1,600 crypto currencies just as easily as it does for hedge funds and equities. Crypto currencies performance, as well as hundreds of equity and alternative markets benchmarks are available for free to AlphaBot users.

Today’s news follows AlphaBot’s recent announcements regarding new client additions (NEED LINK) and that [data from BarclayHedge and Morningstar](#) are available on the AlphaBot platform.

## **About AlphaBot**

[AlphaBot](#), part of AlphaTech Investment Solutions, LLC, combines portfolio construction and execution, professional networking, cloud computing, and data management all in one place. AlphaBot helps allocators -- including high net worth individuals, family offices and institutions -- find and connect with investment platforms, hedge funds, data sources and other providers. Using AlphaBot, allocators can obtain fund performance and benchmarking data, then model, build and execute portfolios all from a consistent, user-friendly interface.
